TITLE:

News in Brief (Kratkiye soobshcheniya) VI Congress of the Polish Association of Parasitology (VI s"yezd Pol'skogo obshchestva parazitologii)

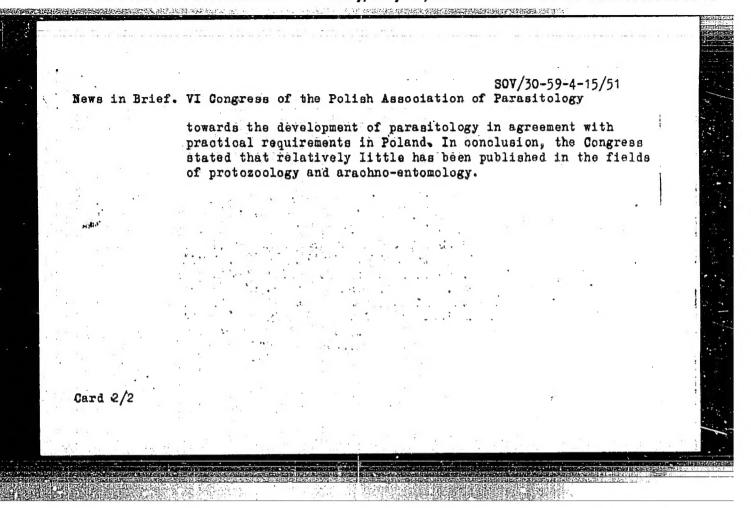

PERIODICAL:

Vestnik Akademii nauk SSSR, 1959, Nr 4, pp 102-103 (USSR)

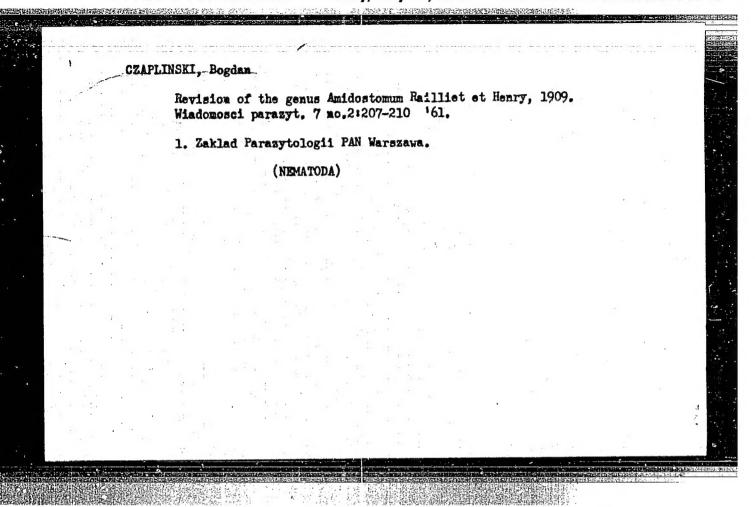

ABSTRACT:

The Congress was held in Lublin between October 19th and October 22nd, 1958 in connection with the 10th anniversary of the Association. More than 200 representatives of Poland took part in it as well as guests from the Soviet Union, Czechoslovakia, Hungary, Bulgaria, the German Democratic Republic, GFR, France and Augusta's. Among other delegates of the Soviet Union the Academicians Ye. N. Pavlovskiy, K. I. Skryabin were present, both honorary members of the Association. On the occasion of the Congress a pamphlet on parasitology and Polish parasitologists was published. Apart from this, the programs of the reports and informations were published in a volume of "Parazitologicheskiye syedeniya" which were to be discussed on the Congress. The first two days were devoted to the achievements of Polish scientists in the field of parasitology. The further work was carried out by committees. The resolutions taken by the Congress were directed

Najnowsze rozwiązania konstrukcyjne w budowie aparatury chemicznej 1959/1960; praca zbiorowa (Latest Design Developments in the Construction of Chemical Apparatus 1959/60; a Collective Work) Warsaw, Państwowe Wydawn. Techniczne, 1960. 127 p. Errata slip inserted. 1,690 copies printed. (Series: Nowa technika, zesz. 32)

Coordinator: Jan Dyduszyński, Professor, Master in Engineering; Scientific Ed. PWT: Irena Gajewska, Master in Science; Tech. Ed.: I. Milewska.

PURPOSE: This book is intended for chemists, engineers, and designers of chemical equipment for research and industry. It may also be used by students in higher technical schools.

Card 1/5_

Latest Design (Cont.)

POL/5033

COVERAGE: The book discusses the latest (up to 1959) trends in the development of some designs for chemical equipment. The authors deal specifically with progress in the design of absorption and distillation equipment, and latest developments in the design of gas compressors and sedimentation separators used in the chemical industry. No personalities are mentioned. References accompany each section.

Abstract /English article/: Strawberries take up less P32 in the fall; if they are then cold-treated and re-transferred to warm place, their uptake increases again; it is then greater in an 8-hour than in a 14-hour day. Four tables, 2 references.

TITLE:

A platinotron

PERIODICAL:

Referativnyy zhurnal, Avtomatika i radioelektronika, no. 10, 1962, 20, abstract 10-3-39d (Prace przemysł. inst. elektroniki, 1961, v. 2, no. 2, 67 - 76; Polish; summaries in English, Russian)

TEXT: The platinotron is a powerful high-voltage tube, used either as amplifier or oscillator. Its amplification factor is small (~10 dB). The bandwidth is 5 to 10%. The efficiency is 70%. The pulsed power of a mass-produced platinotron is only a few kilowatts. In principle, platinotron action is analogous to that of the magnetron. From the structural point of view, the most characteristic property is the delay line, consisting of flat rings arranged in loops, under pulsed loads, its length being close to a half-wave length. These loops also play the part of anode segments. The basic condition of interaction between the electrons and the electromagnetic wave is the equality of the angular velocity of the electrons and the phase velocity of the space harmonic, with which they

Card 1/2

Folglid CATEGORY No. 86105 1959. ABS. JOUR. : RZKhim., No. : Czarnecka, W.; Sobkowska, A. AUTHOR INST. : Polarographic Determination of Lead with TITLE a Background of Ascorbic Acid. ORIG. PUB. : Chem. analit., 1958, 3, No 3-4, 501-504 : It was found that with a background of ABSTRACT ascorbic acid (I), Pb produces a well defined wave at about - 0.42 v and pH about 4. The use of solutions of I as the background permits to obviate the interfering effect of Sn2+ and Cd2+, the waves of which, under the selected conditions, are fully separated from Pb wave. To determine Pb, the sample of material being analyzed, containing not more than 10 mg Pb, is dissolved according to one of the suitable methods. In the presence of interfering ions (UO₂²⁺,Tl⁺, large amounts of Sn²⁺,Cu²⁺) Pb is separated by precipitation with H₂SO₄ or K₂Cr₂O₇ (in the latter case, precipitation is effected in neutral solution). Precipitate of CARD: 1/2

APPROVED FOR RELEASE: Thursday, July 27, 2000 CIA-RDP86-00513R00050943(

COUNTRY : Poland CATEGORY ABS. JOUR. : AZKhim. No. 1959, 20, 86105 AUTHOR INST. TITLE ORIG. PUB. ABSTRACT: PhSO_h is dissolved with heating in solution of CH₃COONH_h, while PhCrO_h precipitate is dissolved in dilute HNO₃. The resultant solutions are diluted with water to 50 ml, 1-5 ml of this solution (10-3 - 10-2 mg/ml Pb) to 50 ml, 1-5 ml of this solution (10-3 - 10-2 mg/ml Pb) are taken, 1 g I is added, diluted with water to 7-8 ml, ph is adjusted to 4 with NH, Oh (solutions containing Cu are adjusted to ph 5), 2 drops of 0.05% solution of gelatin are added, the mixture is diluted with water to 10 ml, N₂ is passed into it, and polarography is carried out. The method permits determination of Pb at concentration up to 10-6 N; optimal concentration of Pb (error not exceeding 4%) is in the range 10-4 - 10-3 M. The method is recommended for determination of Pb in various ores. in determination of Pb in various ores, in CARD: 2/2 metallic Zn and its alloys, in organic compounds, etc. -- A. Nemodruk.
